

THE SUN DISC

The diagram on the 7000 HUMANS Homepage and THE PROCESS page of our website, includes a golden sun disc. This is the original image of the sun disc before we added our diagram.

This sun disc is nearly 4,500 years old. It was found near Stonehenge in England. We have used it to highlight the correspondence between the 4 Phases of the 7000 HUMANS journey and the annual journey of the earth around the sun. It reminds us of the profound cosmic processes that continue without interruption, that all beings on the planet share, that have inspired, intrigued, and helped cultures tune and align their actions for millennia, and are easily overlooked in an epoch of technologies that can override awareness of all natural cycles.

This sun disc is in the Wiltshire Museum in Devises, England.

They write: *“Archaeologists believe the disc was forged in about 2,400 BC, soon after the great sarsen stones were put up at Stonehenge. It is thought it was worn on clothing to represent the sun. The sun-disc, one of only six such finds, was discovered in a burial mound at Monkton Farleigh, just 20 miles from Stonehenge”.* www.wiltshiremuseum.org.uk

The sun disc image above is copyright to the Wiltshire Museum in Devises. The image may not be used without their permission.

We thank the Wiltshire Museum for allowing us to use this image for the 7000 HUMANS.
The 7000 HUMANS Team, 2022.
